PROFESSIONAL SUMMARY

Backend Engineer with a primary focus on the MERN stack (Node.js, Express.js) and secondary expertise in Java Spring Boot. Proven track record in designing scalable RESTful APIs, optimizing PostgreSQL databases, and implementing robust Enterprise application architectures. Achieved over 70% reduction in database retrieval latency through advanced indexing and query optimization. Experienced with building multi-model data structures using JSONB and automating AI-driven pipelines via n8n (RAG, Vector DBs). Adept at solving complex business requirements with comprehensive workflow integrations and secure authentication systems.

TECHNICAL SKILLS

Core Competencies: REST APIs, Scalable Systems, Authentication & Authorization (RBAC), Database Design, API Security

Languages: JavaScript, Java, SQL

Backend Frameworks & Runtime: Node.js, Express.js, Spring Boot

Databases & ORM: PostgreSQL, Sequelize, Hibernate, Vector Databases

Messaging & Automation: Kafka, RabbitMQ, n8n, AI Agents

Tools & Infrastructure: Docker, Git, Bitbucket, GitHub, Postman, Jira, PgAdmin, VS Code, WebStorm, Spring Tool Suite

Frontend & UI: React, TailwindCSS

Soft Skills: Problem Solving, Adaptability, Communication, Team Collaboration, Debugging, Critical Thinking

PROFESSIONAL EXPERIENCE

MPC Cloud Consulting Pvt. Ltd.

Aug 2023 – Present

Associate Software Engineer

Project: Unified Business Operations Platform (Node.js, Express.js, Sequelize, PostgreSQL, Docker)

- Architected a modular enterprise management backend handling projects, customers, vendors, and invoices.
- Developed secure backend authentication flows utilizing a custom Microsoft SSO login handler, coupled with real-time device and geolocation tracking for rigorous audit histories.
- Designed a multi-model PostgreSQL database schema incorporating JSONB, primary/foreign keys, and robust generic functions capable of joining multiple tables while controlling fetch limits.
- Managed the complete end-to-end invoice and expense request lifecycle, designing responsive HTML notification templates to streamline multi-stage workflow approvals for finance and director teams.

Project: SaaS-Based HRMS (Java, Spring Boot, PostgreSQL, Docker)

- Built and deployed scalable backend APIs using Spring Boot, integrating Hibernate ORM to manage complex data access patterns efficiently.
- Spearheaded extensive database query optimizations and implemented strategic indexing, slashing critical data retrieval latency from 5 seconds to 1.5-2 seconds.
- Integrated Kafka messaging queues to facilitate highly reliable, asynchronous communication across disparate microservice environments.

EDUCATION

Maharaja Surajmal Institute of Technology, Delhi

Bachelor of Technology in Electronics and Communication Engineering

June 2023

CGPA: 8.9
